

## **Introduction.**

The Plants of Green Adelaide website is designed to help you identify the flora found in the Green Adelaide Landscape region using images. It has various filters to help reduce the number of species you need to look through. There are distribution maps for all species and status data for most native species. Also, some plant descriptions, how to collect and germinate data for some species of significance.

The species list for Green Adelaide Landscape region was selected manually using the distribution mapping of species in the Southern Mount Lofty Ranges and as such may include or not include some species. Species list will continue to be updated. To search for species found across South Australia, go to <http://syzygium.xyz/saplants/>.

Many of the images and the running of the website is provided by various volunteers, they are associated with the South Australia Seed Conservation Centre, Botanic Gardens and State Herbarium.

All enquiries about the site or for support, please contact the SA Seed Conservation Centre.
